

Cloud Adoption & Strategy

Stop guessing with your IT infrastructure

Moving to the cloud shouldn't mean losing control of your **data** or your **budget**. Unfortunately, many SMBs are rushed into "lift-and-shift" migrations, ending up with bloated, default cloud configurations that cause daily friction and wasted spend.

At Breakwater IT, we bring **decades** of experience directly to your business. While our engineers are **Azure Certified Architects**—capable of engineering highly stable, secure-by-design Microsoft environments—we remain committed to a fiercely independent IT partnership. We have the deep technical expertise to architect, migrate, and manage your infrastructure on whichever cloud platform best serves your specific operational needs, ensuring you get the **right** solution, not just a vendor quota.

- **Strategic Architecture:** We draw on decades of experience to design a secure cloud roadmap, delivering an enterprise-class strategy scaled perfectly for your operations.
- **Beyond the "Lift & Shift":** Simply moving old, inefficient servers to the cloud often just replicates your old problems with a new price tag. We evaluate your specific workloads to leverage true cloud-native services modernising your applications for superior speed, enhanced security, and infinite scalability.
- **Cloud Cost Optimisation:** Cloud computing is powerful, but unchecked expenses eat into margins. Our seasoned architects dive deep to identify improvements, ensuring you only pay for what you actually need.
- **Resilience & The Digital Workspace:** A seamless technology experience is vital for retaining staff. A properly engineered cloud migration removes physical hardware bottlenecks and enables a Secure Remote Workforce, ensuring safe, frictionless access to data whether your team is at home or traveling.
