

Cloud Cost Reduction

Eliminate hidden wastage and take back control of your monthly cloud bill

The promise of the cloud was **flexibility** and **efficiency**, but for many Small Businesses, the reality is a confusing monthly bill that only ever seems to go up. You are likely paying for over-provisioned servers, forgotten storage drives, or premium licensing tiers your team doesn't actually need.

At Breakwater IT, our seasoned architects dive **deep** into your existing setup to identify these wasted resources. We cut through the complex billing jargon to provide **clear, expert-led** guidance, ensuring your systems remain **high-performing** while you only pay for the performance you actually need.

Deep-Dive

Right-Sizing

Expert Guidance

- **The Deep-Dive Infrastructure Audit:** We don't just skim your monthly invoice. Our seasoned architects dive deep to identify hidden wastage, such as idle virtual machines, orphaned storage drives, and legacy resources; pinpointing exactly where your money is draining.
- **Performance Right-Sizing:** Many IT providers over-provision resources "just in case," leaving you paying for maximum capacity 24/7. We adjust your compute and storage tiers to ensure you only pay for the performance you actually need, without sacrificing a drop of speed or stability.
- **Licensing & Subscription Alignment:** We review your user licenses and cloud tiers to ensure you aren't paying premium prices for features your team never uses. We align your IT investments directly with your actual daily operations and core business goals.
- **Proactive Governance & Reviews:** Cloud environments drift over time, and costs can quickly creep back up. We establish ongoing monitoring and sit down with you for Quarterly Business Reviews, translating complex technical billing data into plain English so your budget remains entirely predictable.
