

Cybersecurity Compliance

Turn your security posture from a liability into a competitive advantage.

Smaller businesses assume they are **too small** to be targeted by cyberattacks, but the reality of modern business is much harsher: if you cannot **prove** your digital environment is secure, it will cost you revenue. Today, major enterprises **refuse to partner** with vulnerable vendors, and **cyber insurance** providers are routinely denying coverage or payouts to businesses lacking basic protections.

At Breakwater IT, we treat cybersecurity as a business **enabler**. We cut through the intimidating geek-speak and map your infrastructure against **proven**, government-backed standards. We ensure your business is compliant, **insurable**, and ready to win enterprise contracts, all without crippling your team's daily workflow.

Government-Backed Frameworks (SMB1001 & Essential 8) We eliminate the guesswork by aligning your business with recognised, achievable security frameworks like the ASD Essential Eight and SMB1001. We provide a clear, prioritised roadmap to mature your security posture, ensuring you meet strict baseline requirements without buying unnecessary software.

Safeguarding PII & Client Trust A single breach of Personally Identifiable Information (PII)—like client names, addresses, or health data—can destroy years of hard-earned trust and invite massive regulatory fines. We implement zero-trust architecture and strict access controls to make your sensitive data untouchable to unauthorised users.

PCI DSS & Financial Compliance If your business processes online transactions or card payments, maintaining PCI DSS compliance is non-negotiable. We architect secure, segmented networks that isolate your financial data, protecting your customers' credit card information and shielding your business from liability.

Unlocking Enterprise Contracts & Cyber Insurance Major brands and government agencies now mandate rigorous supply chain security from all their partners. We implement the audited controls required to help you confidently pass vendor security questionnaires and secure comprehensive, low-premium cyber insurance policies.
