

## Enterprise-Grade Networking

A rock-solid foundation for a resilient  
business

Most small and medium businesses unknowingly run their **critical** daily operations on consumer-grade or basic "**prosumer**" networking hardware because true enterprise equipment has traditionally required a massive upfront **investment**. The result? Frustrating **dropouts**, bottlenecked speeds, and massive security blind spots.

At Breakwater IT, we've removed the financial **barrier** to enterprise reliability. We provide a pure Network-as-a-Service (**NaaS**) model. Partnering with best-in-class vendors like **Cisco**, we architect and maintain secure, high-performance networks that simply do not fail—delivered as a simple, **predictable** monthly subscription.

## Enterprise strategy, attainable budget

- **Zero Upfront Capital Costs:** You no longer need to spend tens of thousands of dollars to build a reliable network. We supply, configure, and manage your entire infrastructure for a simple, flat fee per device, per month—protecting your cash flow while upgrading your business.
- **The Cisco & Meraki Enterprise Stack:** We completely eliminate the unreliability of consumer-grade routers. Your environment will be powered exclusively by industry-leading Cisco switching, Cisco Access Points, and Meraki MX Security Appliances for enterprise-grade perimeter defense.
- **Built-In Hardware Refreshes:** Technology ages rapidly, but your network never will. Our NaaS model means you are never stuck with obsolete hardware; we ensure your business always has the best, fastest, and most secure equipment actively running.
