

Quarterly Business Review

Translating complex technology into a clear, predictable business strategy.

For most small and medium businesses, IT is a black box of **unpredictable** expenses and **reactive** fixes. You pay the monthly invoices, but you rarely know exactly what you are getting, how secure you truly are, or what expensive hardware upgrades are lurking just around the corner.

At Breakwater IT, we believe technology should be managed like any other critical business unit—with **clear** strategy, total **transparency**, and accurate **forecasting**. Through our Quarterly Business Reviews (QBRs), we act as your Virtual Chief Information Officer (vCIO). We sit down with your leadership team every 90 days to translate complex technical data into a plain-English, executive-level roadmap, ensuring your IT investments perfectly align with your long-term business goals.

Stop guessing with your IT Budget

- **Comprehensive IT Health Scoring** We continuously audit your environment against over 100 enterprise-grade standards. Instead of drowning you in technical jargon, we present clear, visual health scores across your security, infrastructure, and compliance, so you know exactly where your business stands at a glance.
- **Predictive Budgeting & Asset Lifecycling** No more surprise IT bills. We actively track the warranty status, age, and performance of every computer, server, and network device in your business. We then generate highly accurate, multi-year budgets detailing exactly what hardware needs replacing and when, allowing you to protect your cash flow.
- **The Multi-Year Technology Roadmap** We don't just fix what is broken today; we plan for tomorrow. We build and maintain a visual, multi-year strategic roadmap that prioritises technology upgrades, cloud migrations, and cybersecurity initiatives based strictly on your operational needs and budget constraints.
