

Strategic IT Review

The Breakwater IT Blueprint

At Breakwater IT, our Strategic IT Review cuts through the noise. We map your current technology landscape against our proven, four-stage methodology. By identifying exactly where your business is currently stalled, we deliver a plain-English roadmap to eliminate daily friction and scale your operations safely.

1. Stabilise

Before we build, we fix the foundation. We focus on eliminating the "break-fix merry-go-round". This means ensuring rock-solid enterprise-grade networking, verifying backups, and stopping the daily IT headaches that cause costly downtime.

2. Secure

Once stable, we lock it down. We implement invisible boundaries and zero-trust protections that secure your remote workforce without hindering their experience. We align your business with achievable, frameworks like SMB1001 to protect you from emerging threats.

3. Optimise

With a stable and secure foundation, we focus on performance and budget. We audit your cloud infrastructure to slash wasted spend, streamline your digital workspace, and align your IT investments directly with your core business goals.

4. Extend

IT transitions from a cost center to a strategic advantage. We look ahead, leveraging advanced cloud architecture and enterprise strategies to ensure your technology scales effortlessly as your business grows.
